**Interview Questions****15m****1. What are all the looping structures in JavaScript?**

Answer: Following are looping structures in Javascript:

- For
- While
- do-while loops

**2. Explain the difference between "==" and "===".**

Answer: "==" checks only for equality in value whereas "===" is a stricter equality test and returns false if either the value or the type of the two variables are different.

**3. What is the difference between an alert box and a confirmation box?**

Answer: An alert box displays only one button which is the OK button.

But a Confirmation box displays two buttons namely OK and cancel.

**4. What is SASS and what are its uses?**

Answer: The SASS is useful in reducing the usage of CSS which will reduce the time and saves the code that in turn increases code reusability and reduces code redundancy. It provides own syntax for the CSS provides in developing more efficient code. SASS is a superset of CSS which is easier to use and it contains all the features of CSS.

## 5. How SASS is different from CSS?

Answer: This is the common SASS Interview Questions asked in an interview.

CSS is Cascading Style Sheets whereas SASS is Syntactically Awesome Style Sheets and SASS is a superset of CSS and it contains all the features of CSS. SASS is a CSS pre-processor that will allow using the different operations and using variables, mixins, functions, imports and different kinds of loops. Any types of variables can be declared, defined and used. It will use nested syntax.

## 6. What Bootstrap Package Includes?

Answer: Scaffolding – Bootstrap provides a basic structure with Grid System, link styles, and background. This is covered in detail in the section Bootstrap Basic Structure

CSS – Bootstrap comes with the feature of global CSS settings, fundamental HTML elements styled and enhanced with extensible classes, and an advanced grid system. This is covered in detail in the section Bootstrap with CSS.

Components – Bootstrap contains over a dozen reusable components built to provide iconography, dropdowns, navigation, alerts, pop-overs, and much more. This is covered in detail in the section Layout Components.

JavaScript Plugins – Bootstrap contains over a dozen custom jQuery plugins. You can easily include them all, or one by one. This is covered in details in the section Bootstrap Plugins.

Customize – You can customize Bootstrap's components, LESS variables, and jQuery plugins to get your very own version.

## 7. What is Twitter Bootstrap?

Answer: Bootstrap is a sleek, intuitive, and powerful, mobile first front-end framework for faster and easier web development. It uses HTML, CSS and Javascript.

Bootstrap was developed by Mark Otto and Jacob Thornton at Twitter. It was released as an open source product in August 2011 on GitHub.
